David,

Please see the email below on the status of the Columbus Federal 1-16H. Please let me know if you need anything else. It looks like we should have this one back on production around mid-March.

Thank you,

Bob Sandbo

Subject: RE: Continental info needed

When we told Weatherford that we were proceeding with the plan to install their jet pump in the Columbus Federal 1-16H they looked at the particular well location again and this time told us that in order to safely operate a jet pump on this well we will need an additional vessel placed near the wellhead. This vessel is being refurbished and will not be ready until the first or second week of March. At that time, we will be ready to turn on the jet pump. This vessel is needed because the facility is on a different pad from the well. In the mean time we will be building containment for this vessel.

Thank you,

Matt LaVoie
Production Engineer

Matt,

Are you done with the Columbus Federal 1-16H? NDIC is wanting to know when we will get this one back on production.

Thank you,

Hello Bob,
Hope all is well.

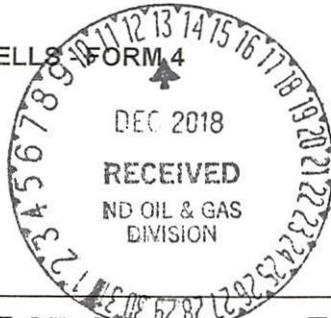

I need the below updates/items.

#27453 Hartman 5-28H3. Plugged on 1/4/19. Need to submit Form 7 plugging report.
#25156 Columbus Federal 1-16H SI for 22.6 months. Was noted to have a workover on Jan 2019.

DETAILS OF WORK

Continental Resources, Inc. proposes to install a jet pump and bring this well back to production. The tubing and ESP will be pulled from the well and the jet pump BHA will be installed. Installation should be complete by the end of the year. Once the jet pump is installed, we will notify NDIC of the final work done and the date the well is brought back on production.

RE: COLUMBUS FEDERAL 1-16H
NESE 16-153N-101W
MCKENZIE COUNTY
WELL FILE NO.: 25156
Report Date of Last Production: 3/1/2017

Dear Bob Sandbo:

Our records indicate that the above captioned well has not produced or injected **in over a year**, and is in violation of Section 43-02-03-55 of the North Dakota Administrative Code (Abandonment of Wells). This rule states in part that the failure to produce a well for a period of one year constitutes abandonment of the well. Any such well must be plugged and the site reclaimed.

Please place this well back into production or submit for approval plug and abandonment procedures. If the well is to be utilized in the future, a temporarily abandoned status may be granted, provided it can be demonstrated that the well is to be used for purposes related to the production of oil and gas. The temporarily abandoned status is for one year, with extensions upon application. Before a well is granted a temporarily abandoned status, the perforations must be isolated, the integrity of the casing proven, and its casing sealed at the surface, all in a manner approved by the director. A state field inspector must witness the mechanical integrity test. If you have any questions, feel free to contact our office.

Sincerely,

Richard Dunn
Petroleum Engineer - Field Inspector

DETAILS OF WORK

Continental Resources, Inc. has inspected all the sites listed on the attached list and all are in compliance with NDAC 43-02-03-49. All sites are in compliance based on the fact that our oil storage tanks, flow-through process vessels, recycle pumps, and load lines are all located within secondary containment.

OKLAHOMA CITY, OK 73126

RE: North Dakota Administrative Code (NDAC) Section 43-02-03-49
Perimeter Berm Requirement

NDIC # Please see attached list of 103 Facilities

Dear Bob Sandbo:

Please be advised that the attached list of facilities require a perimeter berm to be constructed within 180 days of this notice because they have:

1. Storage tanks;
2. Daily throughput of more than one hundred barrels of fluid per day; and
3. Includes production equipment or load lines that are not contained within secondary containment dikes

The berm must be at least six inches in height, constructed of sufficiently impermeable material to provide emergency containment, and must be maintained until the facility is either granted a waiver or the site is reclaimed.

Pursuant to NDAC Section 43-02-03-49 - Within one hundred eighty days from the date the operator is notified by the Commission, a perimeter berm, at least six inches in height, must be constructed of sufficiently impermeable material to provide emergency containment and to divert surface drainage away from the site around all storage facilities and production sites that include storage tanks, have a daily throughput of more than one hundred barrels of fluid per day, and include production equipment or load lines that are not contained within secondary containment dikes. The Director may consider an extension of time to implement these requirements if conditions prevent timely construction, or modification of these requirements if other factors are present that provide sufficient protection from environmental impacts.

This perimeter berm requirement may be modified or waived if the operator can demonstrate that other factors are present that provide sufficient protection from environmental impacts. A Sundry Notice (Form 4) outlining any engineering controls or other factors must be submitted to the Commission for approval of this modification or waiver. Should you have any questions regarding this matter, feel free to contact me at 701-770-3554.

Sincerely,

Richard Dunn
Field Inspector

GEOLOGIST'S SUMMARY

INTRODUCTION

The Continental Resources, Inc. Columbus Federal 1-16H, SHL: 2593' FSL 318' FEL, S16 T153N R101W is located approximately 2 miles west and 7 miles South of Williston, North Dakota just south of the Missouri River. The Columbus Federal 1-16H is a horizontal well in the Baker Field drilling under the Lewis and Clark State Wildlife Management Area. The well was planned for one 9951' long northerly transect drilled structurally up dip in the middle member of the Bakken Formation. The terminus of the lateral bore was expected to be 15' TVD higher than the landing point of the curve.

The geological objective was to remain in the 10' thick Target Zone of the Middle Bakken, stratigraphically situated from 15' to 25' beneath the base of the Upper Bakken Shale. The drilling plan included a vertical hole to be drilled to MD 2674', then hold an inclination of 19.02° with and azimuth of 333.85° until kick-off point was reached in the Lodgepole Formation at MD 10594'. Directional tools were utilized to build a curve and land within the legal setbacks of Section 9 in the middle member of the Bakken Formation. 7" intermediate casing was run to MD 11371', TVD 10532', 231' FSL 1742' FEL in S9 T153N R101W. A single 6" horizontal lateral was then drilled along a 333.85° azimuth and a turn to 0.0° at MD 12277', with a projected bottom hole termination at MD 21356', TVD 10522', 200' FNL 1980' FEL in S4 T153N R100W.

OFFSET INFORMATION

Control for developing a prognosis of formation tops and in determining a structure model for the target zone along the course of the lateral was obtained from the Continental Resources regional structural mapping and the #1 Mildred and the #1 FLB Morris 11-23 wells noted on the figure below. Formation tops and structural relationships between the control wells and the Columbus Federal 1-16H are shown in the table below.

DRILLING OPERATIONS

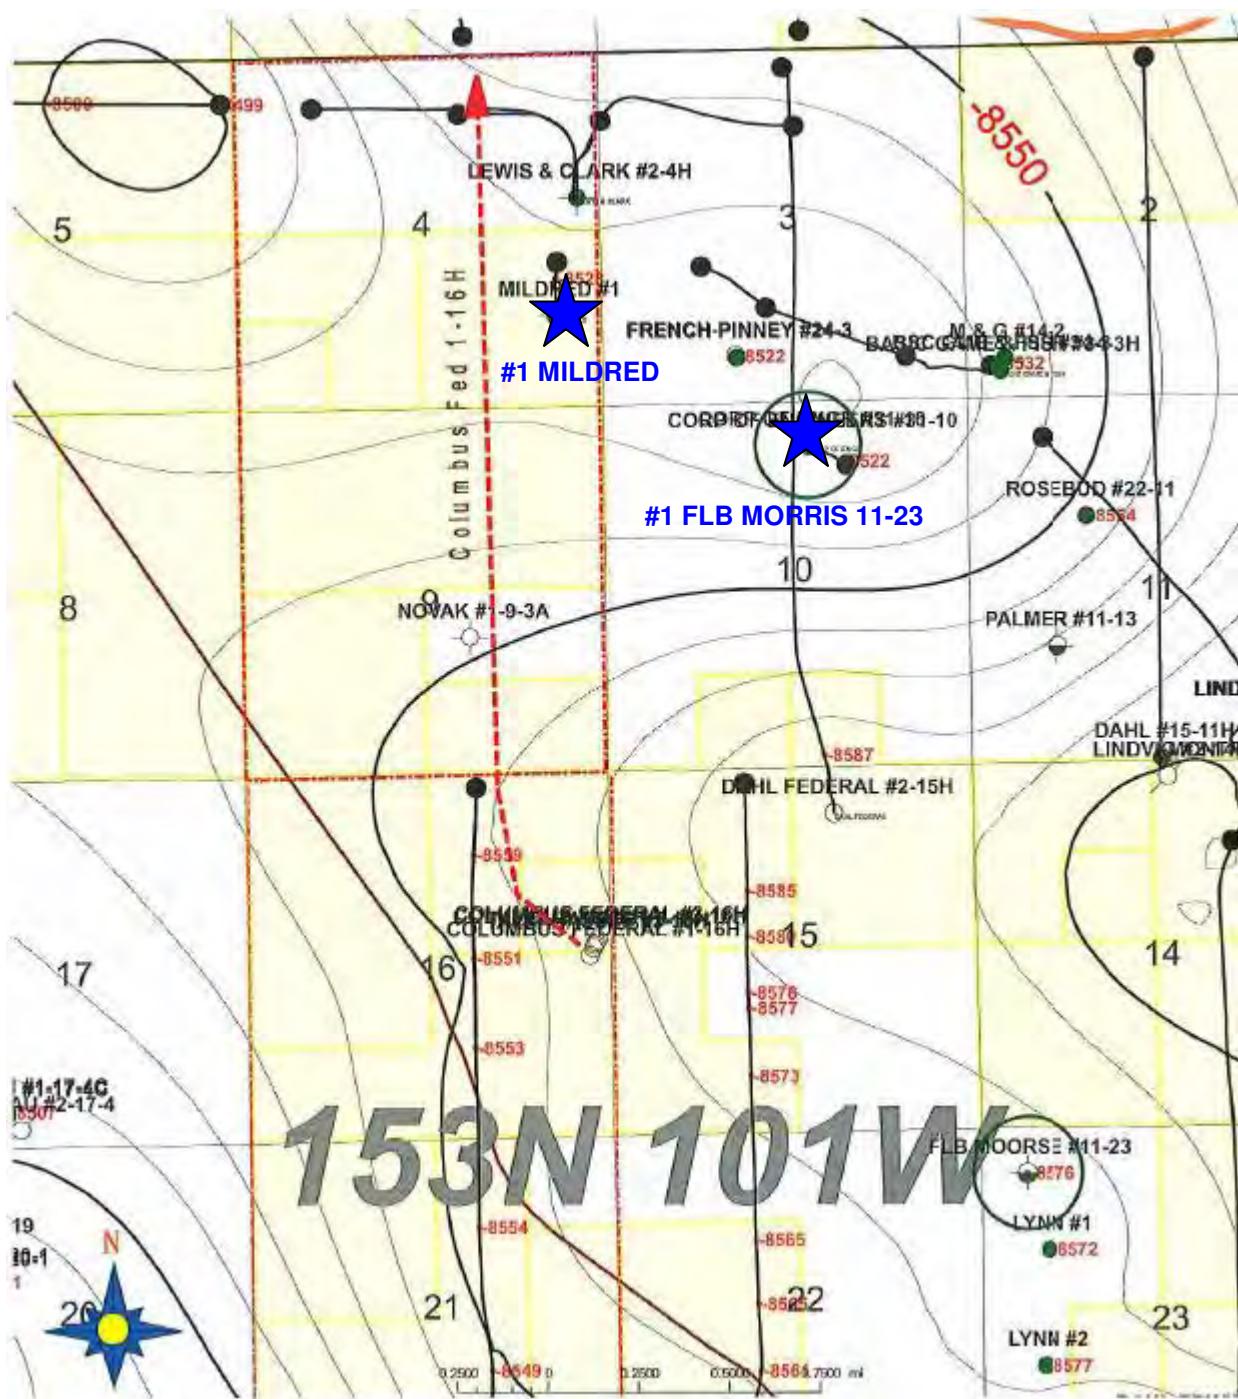

Vertical and Curve

Patterson 490 spudded the Columbus Federal 1-16H on April 22, 2013. A 13 5/8" hole was drilled with fresh water to 1947', isolated with 9 5/8" 36# J55 STC casing, and cemented to surface. After surface casing operations were concluded, drilling fluid was changed to diesel invert for the remaining vertical hole and curve build sections. An 8 3/4" PDC and mud motor was used to drill out of the surface casing to kickoff point at MD 10563'. Directional tools employing a Leam 2.25 bent assembly and a Security FXD55M to land the build curve at MD 11401' TVD 10532' with a projected inclination of 90.90°. 7", 26#, 29#, & 32# HCP-110, LTC intermediate casing was then run to MD 11371' and cemented.

Lateral

Diesel invert mud used while drilling the vertical and curve portions of the hole was replaced with 9.7 to 9.95 # sodium chloride brine for the remainder of drilling operations. A Security FX64 6" bit and 1.5 Deg. steerable motor assembly was used to drill the lateral section.

WELLSITE LOCATION MAP

GEOLOGICAL EVALUATION

Well site geological supervision of Columbus 1-16H was provided by Monaco Services, Inc., with one wellsite geologist and one mudlogger. Monaco personnel obtained gas quantification utilizing a Bloodhound unit 0585 and a MSI 2100 gas extractor. WITS information was imported from the drilling rig Pason EDR system. Rig crews caught lagged 30' samples from MD 8600' to 11400' and 50' samples from 11450' to TD at MD 21276'. Samples were examined microscopically with plain and UV light as caught.

LITHOLOGY AND HYDROCARBON SHOWS

Vertical and Curve

Geologic evaluation began at 8600' above the **Charles Formation**. The Top of the Charles was encountered at MD 8660' TVD 8320' (-6379'), 13' structurally higher than the prognosis. The Base of the Last Charles Salt was encountered at MD 9417' TVD 9040' (-7099'), 9' structurally lower than the prognosis and 46' lower than the nearest Control well, the #1 Mildred. While drilling through the Ratcliffe Interval, trace pinpoint vuggy porosity with a trace of black hydrocarbon stain was observed. Gas increased from 160 units to 214 units and a faint slow milky yellow cut was also observed.

The top of the **Mission Canyon Formation** was encountered at MD 9628' TVD 9246' (-7305'), 9' high to the prognosis and 40' structurally low to the #1 Mildred. Shows were observed at MD 10020' TVD 9614' (-7673), gas increased from 265 units to 586'. Samples had a trace show and consisted of WACKESTONE: cream to very light brown mottled firm microcrystalline porosity trace asphaltic staining faint slow milky yellow cut.

The **Lodgepole Formation** was observed at MD 10210' TVD 9793' (-7852'), 28' high to the prognosis and 8' structurally low to the #1 Mildred and the well was "kicked-off" at 10562'. Five gamma markers were selected and used to calculate the landing point while drilling through the formation. The "False Bakken" was observed at MD 11104' TVD 10501' (-8560'). Total gas increased from 300 units to 400 units while in this interval. The Scallion Zone was observed to exist between MD 11108' and 11136', samples had a good show and consisted of MUDSTONE light gray subhard dense microcrystalline no visible porosity very pale yellow fluorescence slow faint milky pale yellow cut. Due to possible fracturing, total gas shot up immediately from 340 units to over 2500 units while drilling through the Scallion Interval with the chromatograms indicating the presence of oil with a change in gas composition.

The **Bakken Formation Upper Shale** was encountered at MD 11142' TVD 10509' (-8568'), 1' high to the prognosis and 3' structurally low to the #1 Mildred. Samples consisted of CARBONACEOUS SHALE black to very dark graybrown firm blocky brittle non-calcareous non-fluorescent slow milky to streaming pale yellow cut. Total gas in the Bakken Formation Upper Shale ranged between 460 to 1433 units.

The **Middle Member of the Bakken Formation** was encountered at MD 11215' TVD 10525' (-8584'), 3' high to the prognosis and 3' structurally low to the #1 Mildred. Samples observed while drilling downward through the 15' of section above the top of the target zone consisted of SILTACEOUS CALCAREOUS DOLOMITE- light to medium gray graybrown firm microcrystalline moderately argillaceous dolomitic pale yellow green fluorescence immediate milky and slow streaming pale green cut, as well as SILTACEOUS CALCAREOUS DOLOMITE- light to medium gray graybrown firm microcrystalline moderately argillaceous dolomitic pale yellow green fluorescence immediate milky and slow streaming yellow green cut. The first encounter with the top of the **Target Zone** was at MD 12093' TVD 10538' (-8597'), and consisted of ARENACEOUS CALCAREOUS DOLOMITE- light gray brown sub-hard fine grained moderately well sorted subangular sand grains in light gray moderately calcareous dolomitic cement trace intercrystalline porosity faint pale yellow fluorescence immediate milky yellow cut.

The curve was landed in the Middle Member of the Bakken Formation at MD 11371' TVD 10532' with a projected inclination of 90.57°. The landing point of the curve was approximately 7 vertical feet above the Top of the Target Zone.

Lateral Samples Shows

Samples observed along the course of the lateral when the well path was in the Target was Arenaceous Dolomite. Gamma values observed while drilling through the target varied from 42 to 72 API. Samples from directly above the top of the Target Zone consisted of SILTACEOUS CALCAREOUS DOLOMITE- light gray brown firm very fine siccose silty to very fine arenaceous trace intercrystalline porosity faint dull yellow green fluorescence trace dark brown spotty hydrocarbon stain immediate pale yellow green milky cut, and above that was SILTACEOUS CALCAREOUS DOLOMITE- light gray brown firm very fine siccose silty to very fine arenaceous trace intercrystalline porosity faint dull yellow green fluorescence trace dark brown spotty hydrocarbon stain immediate pale yellow green milky cut. The lithology and gamma signatures throughout the well were fairly consistent and often identified through the lateral. Total Gas readings while drilling through the Target Zone ranged from 1200 to 2600 background units in the first half of the lateral and increasing to 2500 to 3500 background units in the second half. A green frothy oil was observed in the possum belly and on the shakers throughout the lateral while drilling. The lateral was completed in two runs so the only trip gas was 3531 units@ MD 14418'. The Gas Buster was on the entire lateral and the flares were consistently 3-8' and peaking as high as 20'.

GEO STEERING

The Target Zone within the Middle Member of the Bakken Formation is 10 vertical feet thick and is directly beneath approximately 3-4 vertical feet of higher gamma slightly siltaceous calcareous dolomite. The top of the target exists 15' beneath the base of the Upper Bakken Shale, the bottom of the target exists 25' beneath the base of the Upper Bakken Shale. The initial well plan was to land in the Target Zone approximately 15' below the top of the Upper Bakken Shale and drill the lateral up dip at 90.09°. The curve was landed approximately 8' below the base of the Upper Bakken Shale at MD 11371' TVD 10532' at a projected inclination of 90.57°. Upon landing the curve, steering inputs were implemented as required to maintain the upward trajectory of the wellbore, verify formation dip, and maximize ROP and exposure to favorable reservoir rock.

End Lateral																				

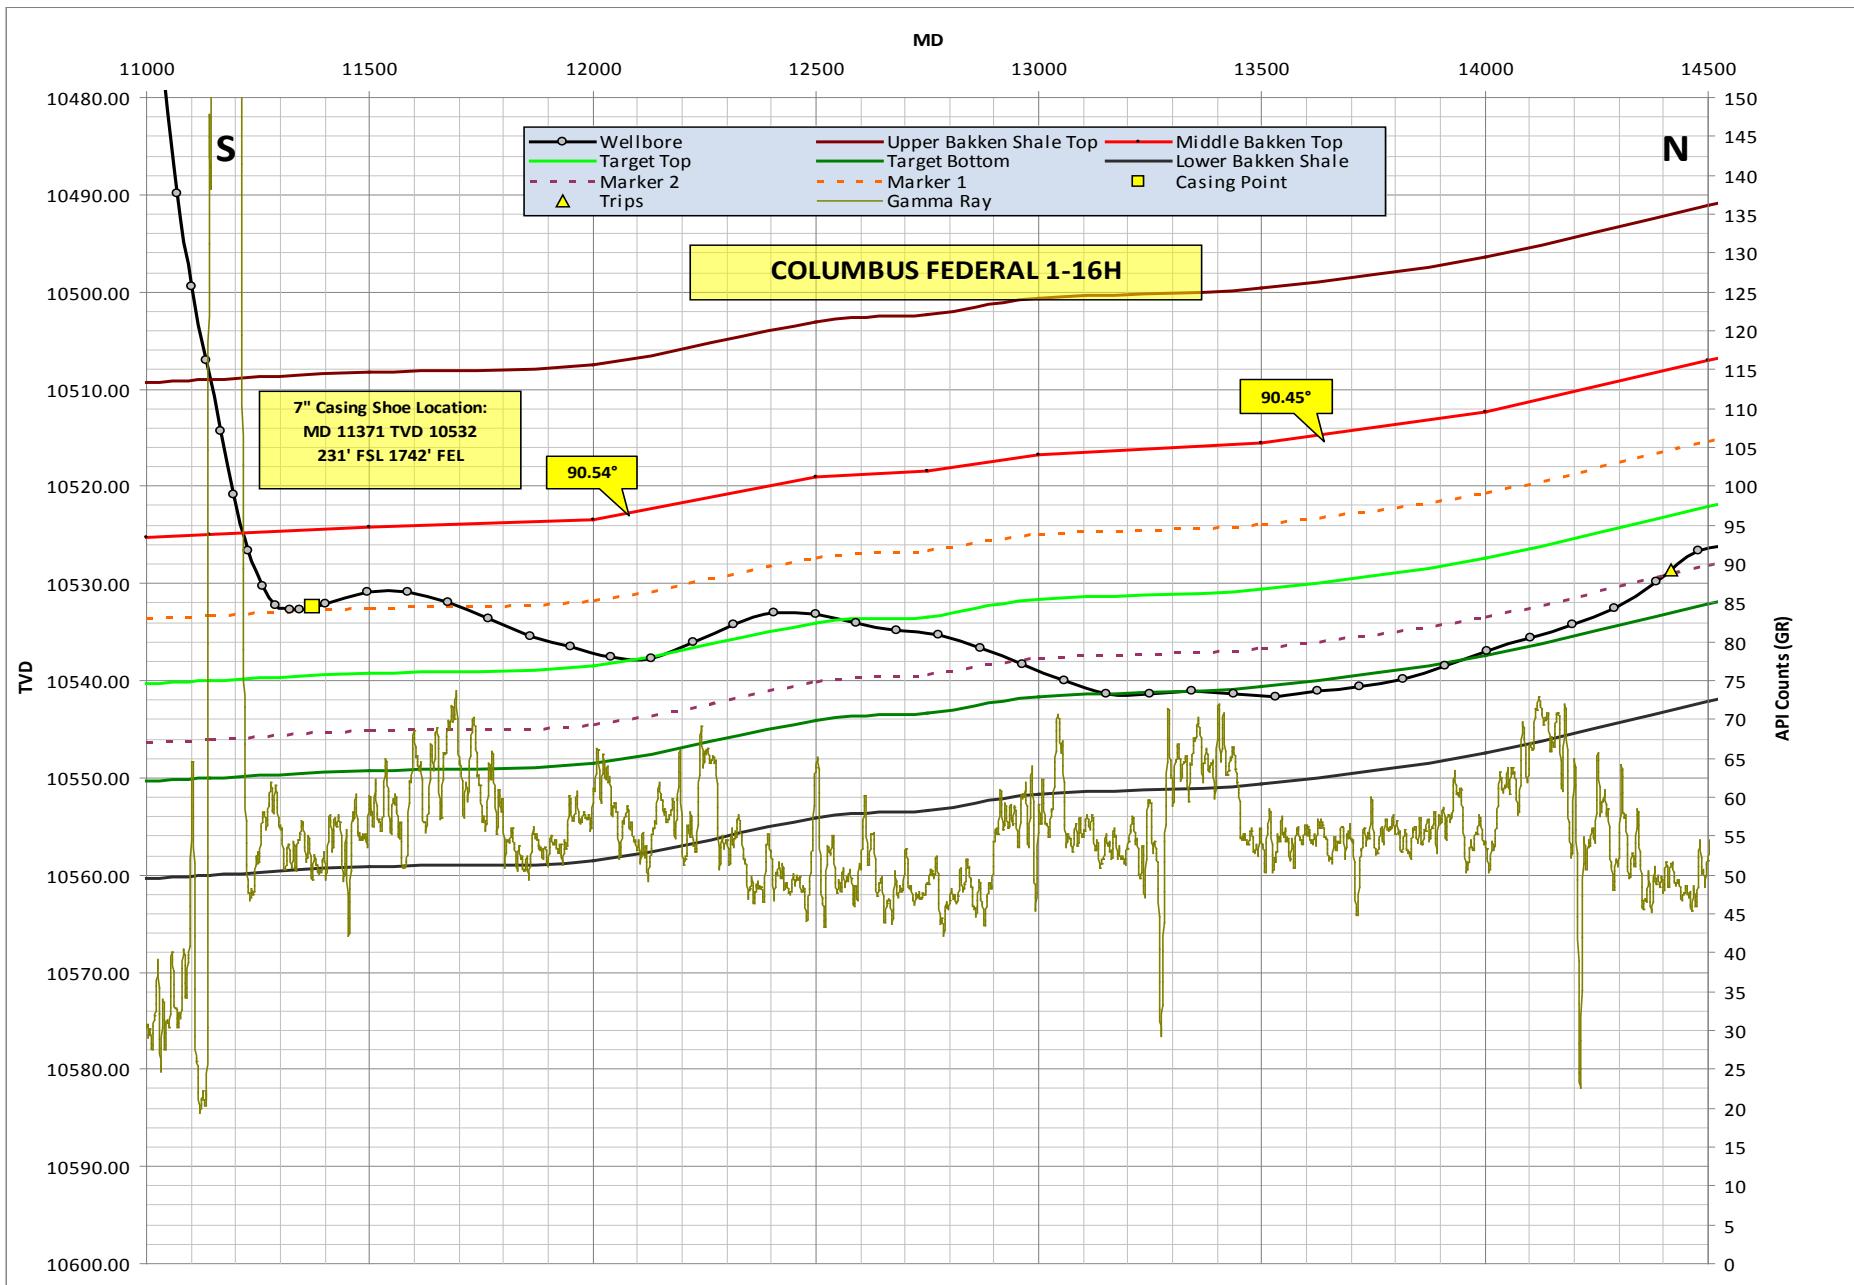

Figure 1. Landing the Curve

As depicted in Fig. 1 above, the lateral was landed 7' above the top of the Target Zone. The BHA exited the casing shoe at 90.57° and drilled ahead encountering the Target Top at MD 12011 and again at MD 12258' establishing initial formation dip at 90.54° .

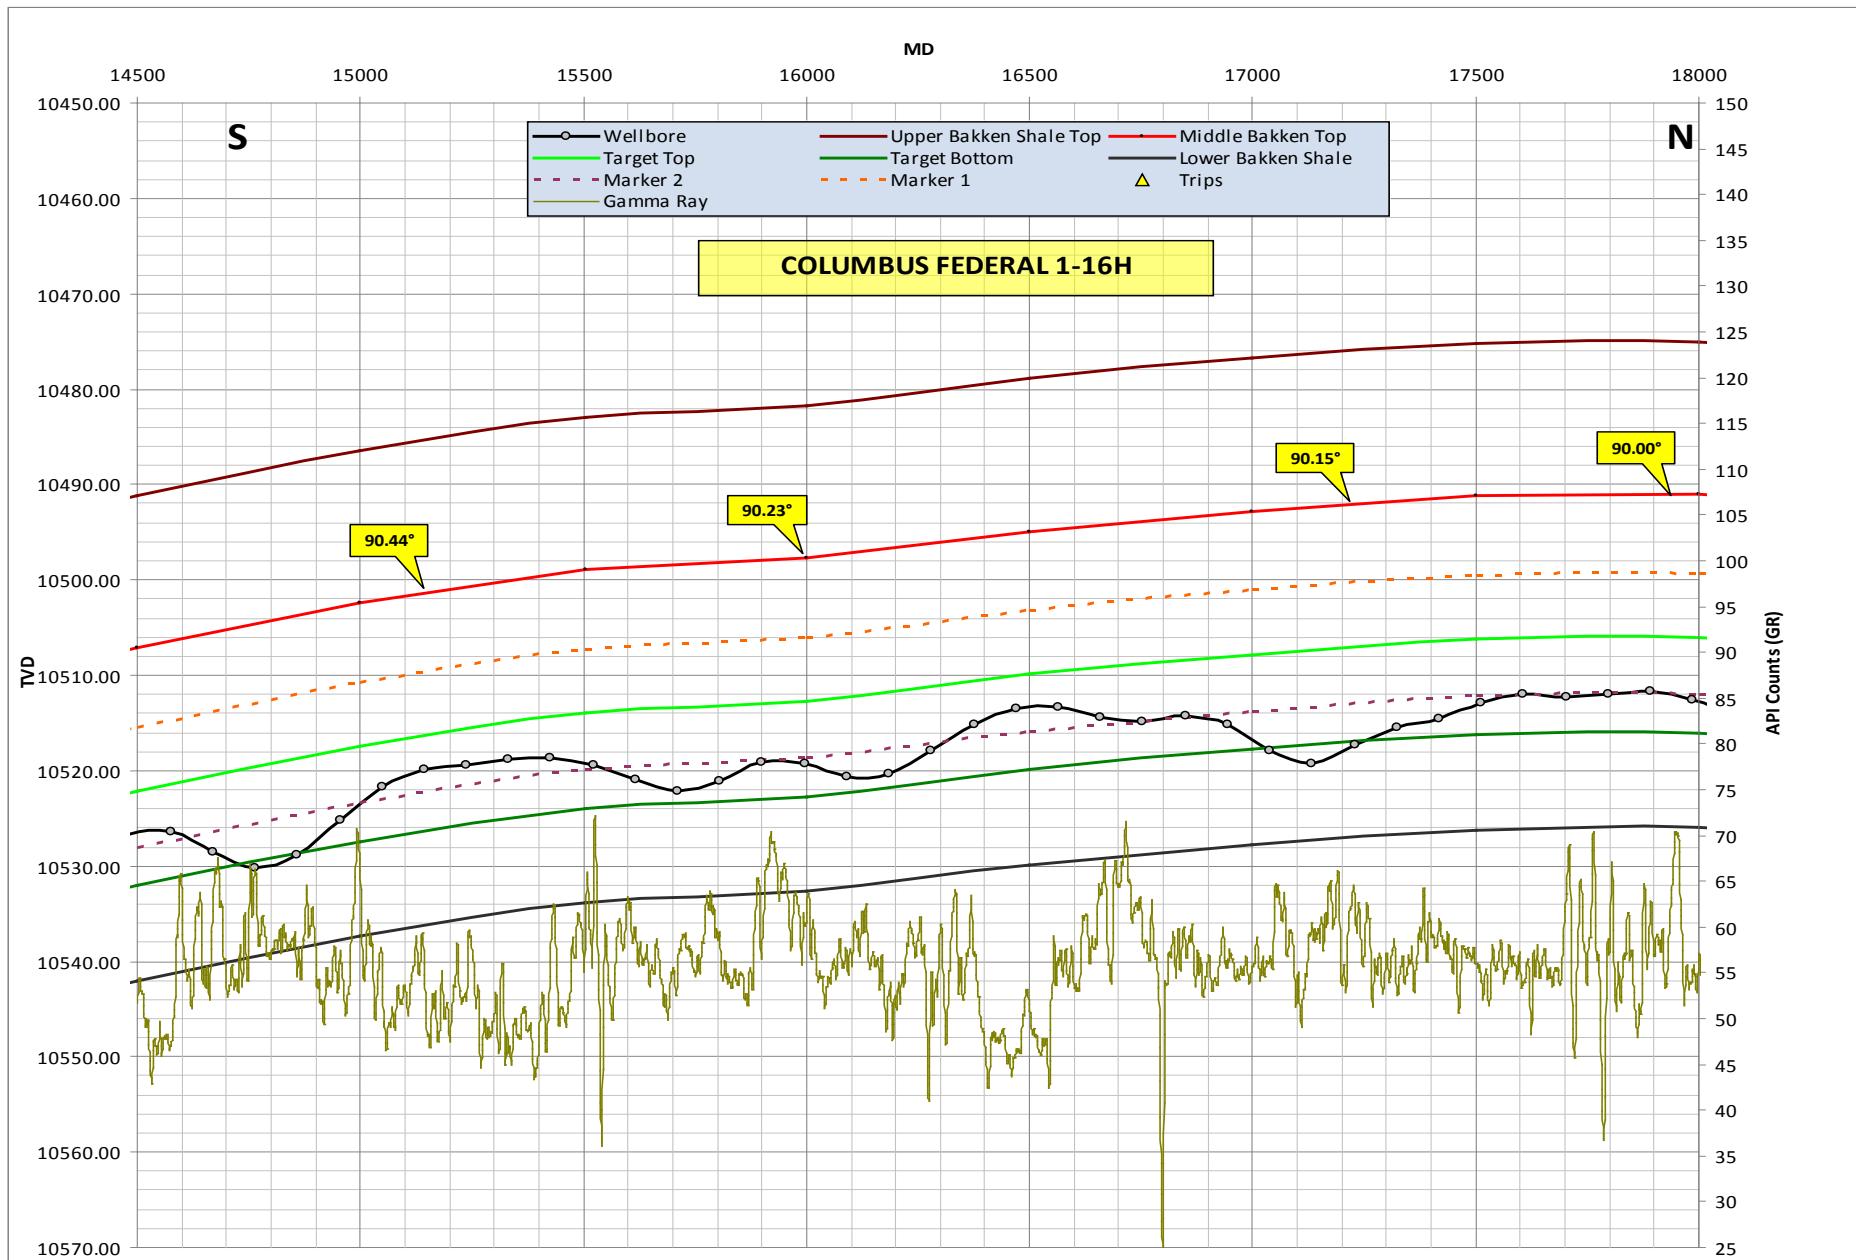

Figure 2. Lateral 14500' to 18000'

As depicted in Fig. 2, upward trajectory was maintained and multiply Marker 2 encounters indicated a formation dip change as it gradually lowered our dip from 90.44° to 90.00° .

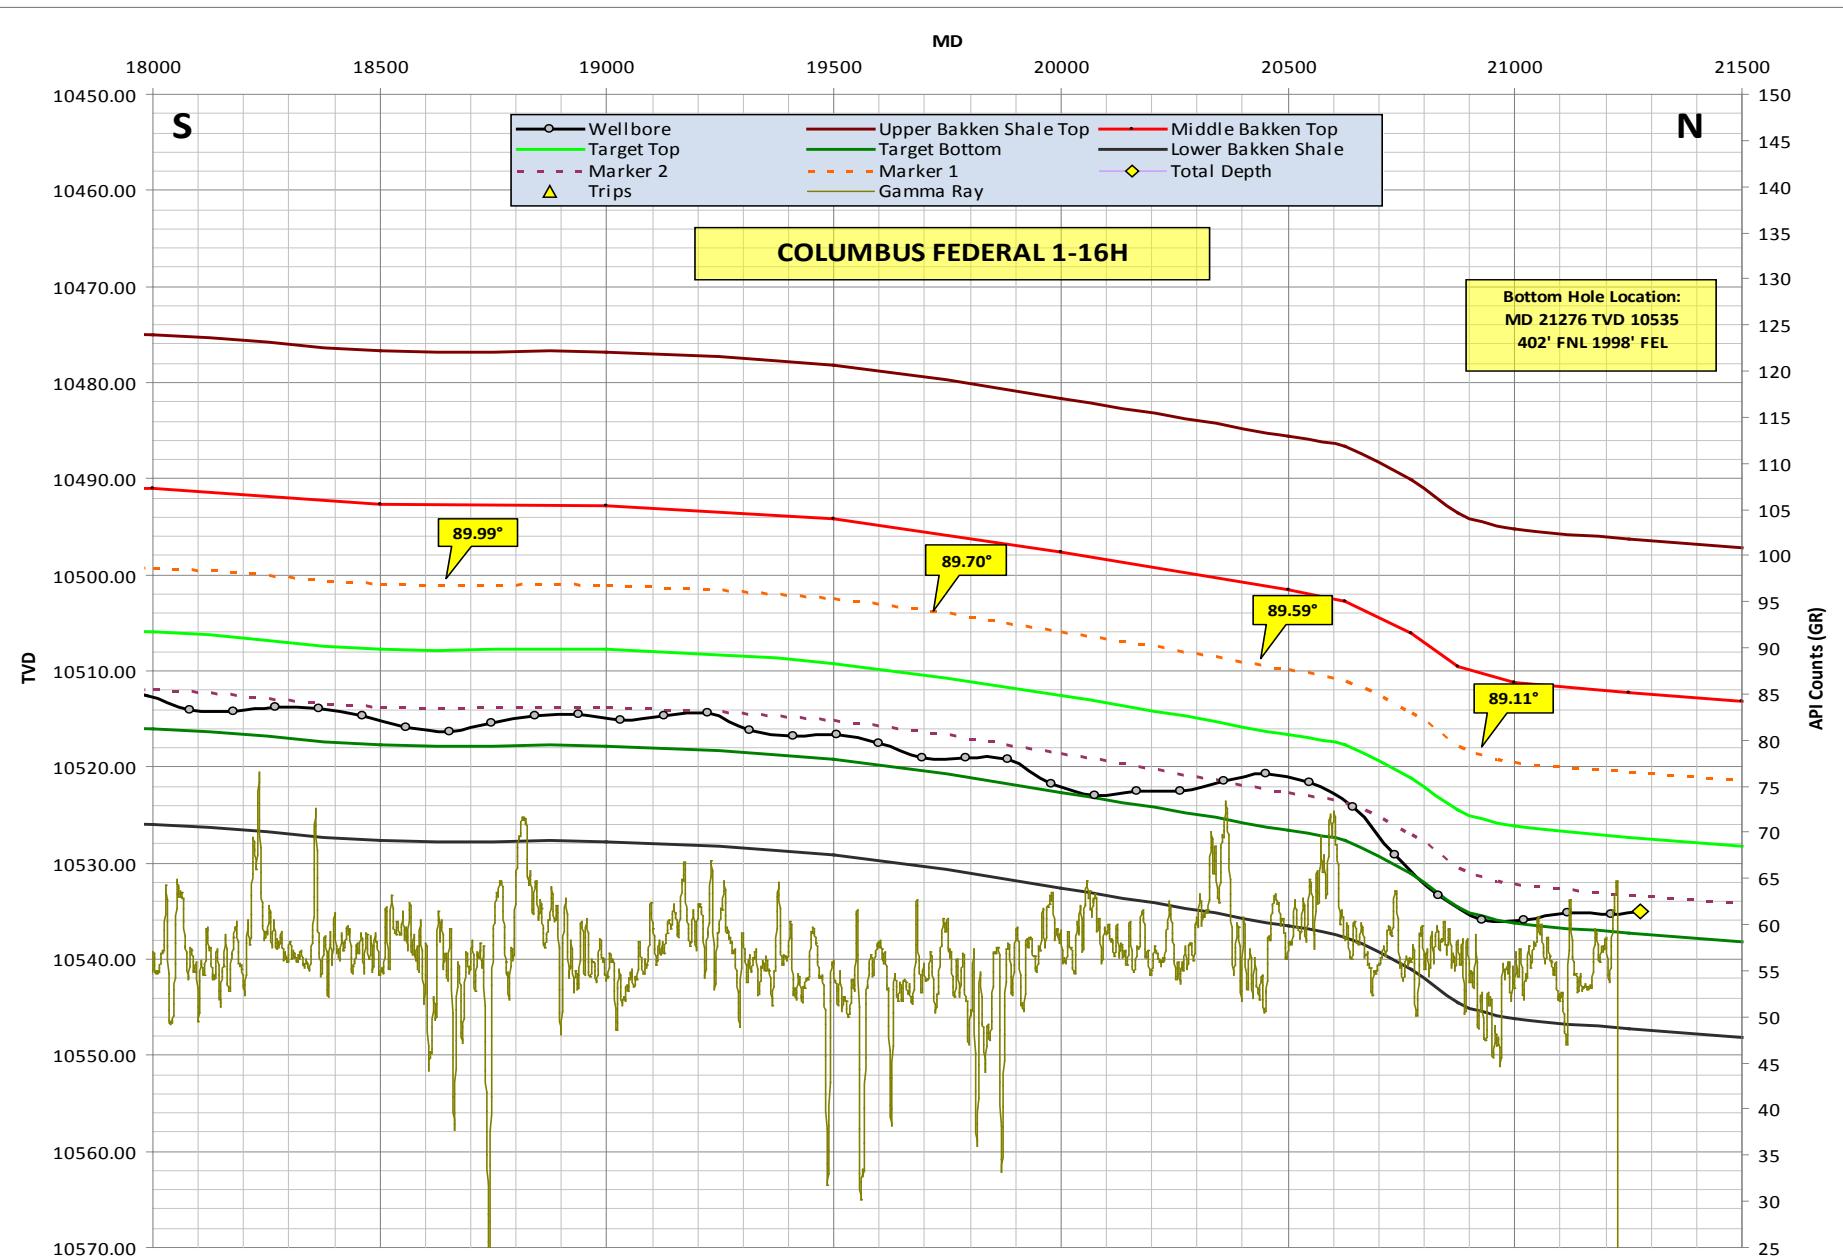

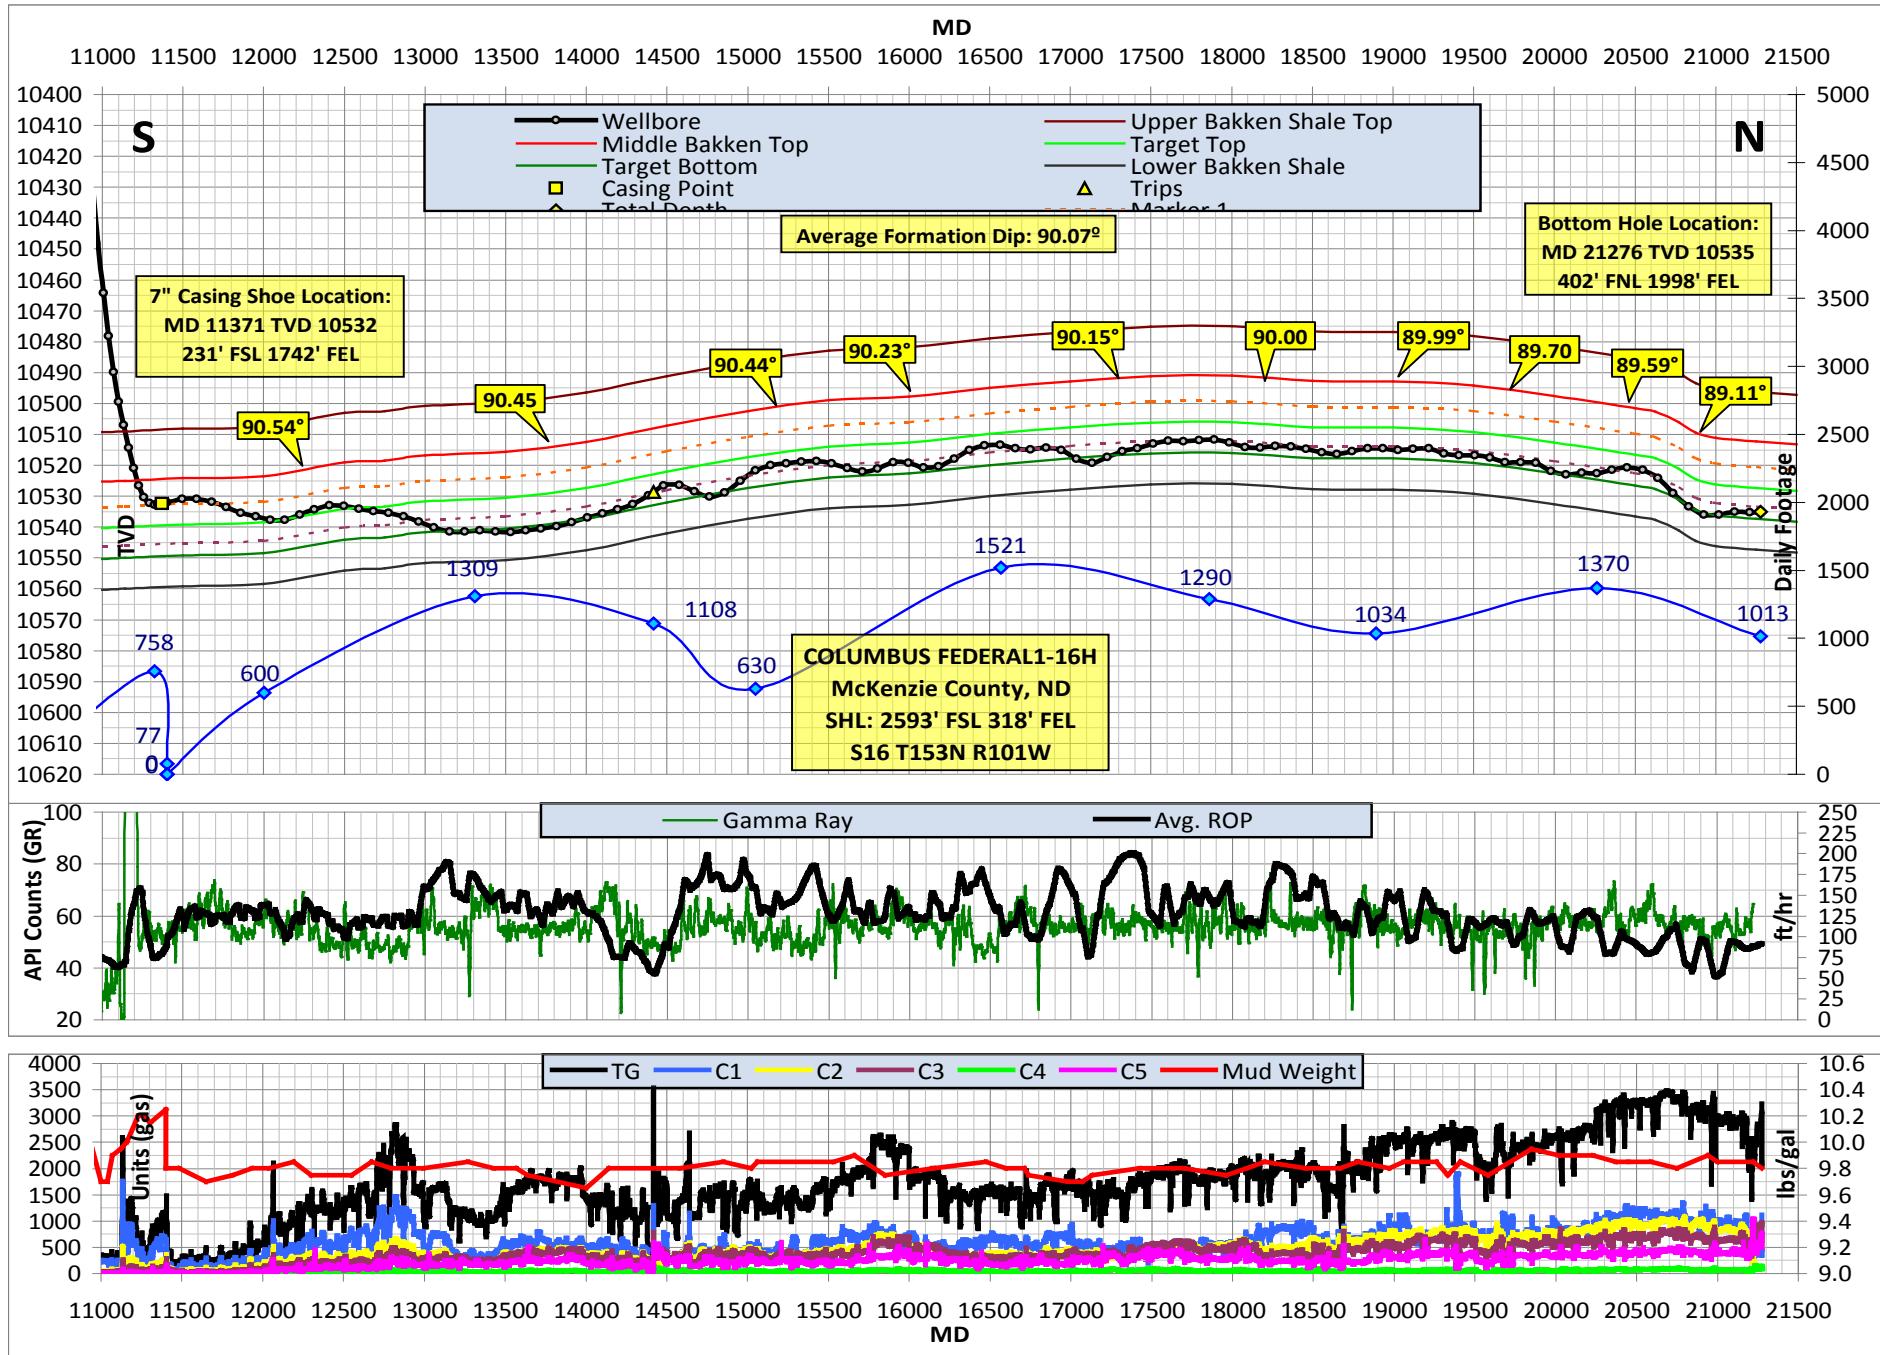

Figure 3. Lateral 18000' to TD at 21276'

As depicted in Fig. 3, dip started on a downward trajectory at MD 18000' and dip continued to decrease from an 89.99° to an 89.11° before the formation flattened out slightly at the end of the lateral. The average formation dip over the course of the lateral was calculated at 90.07° .

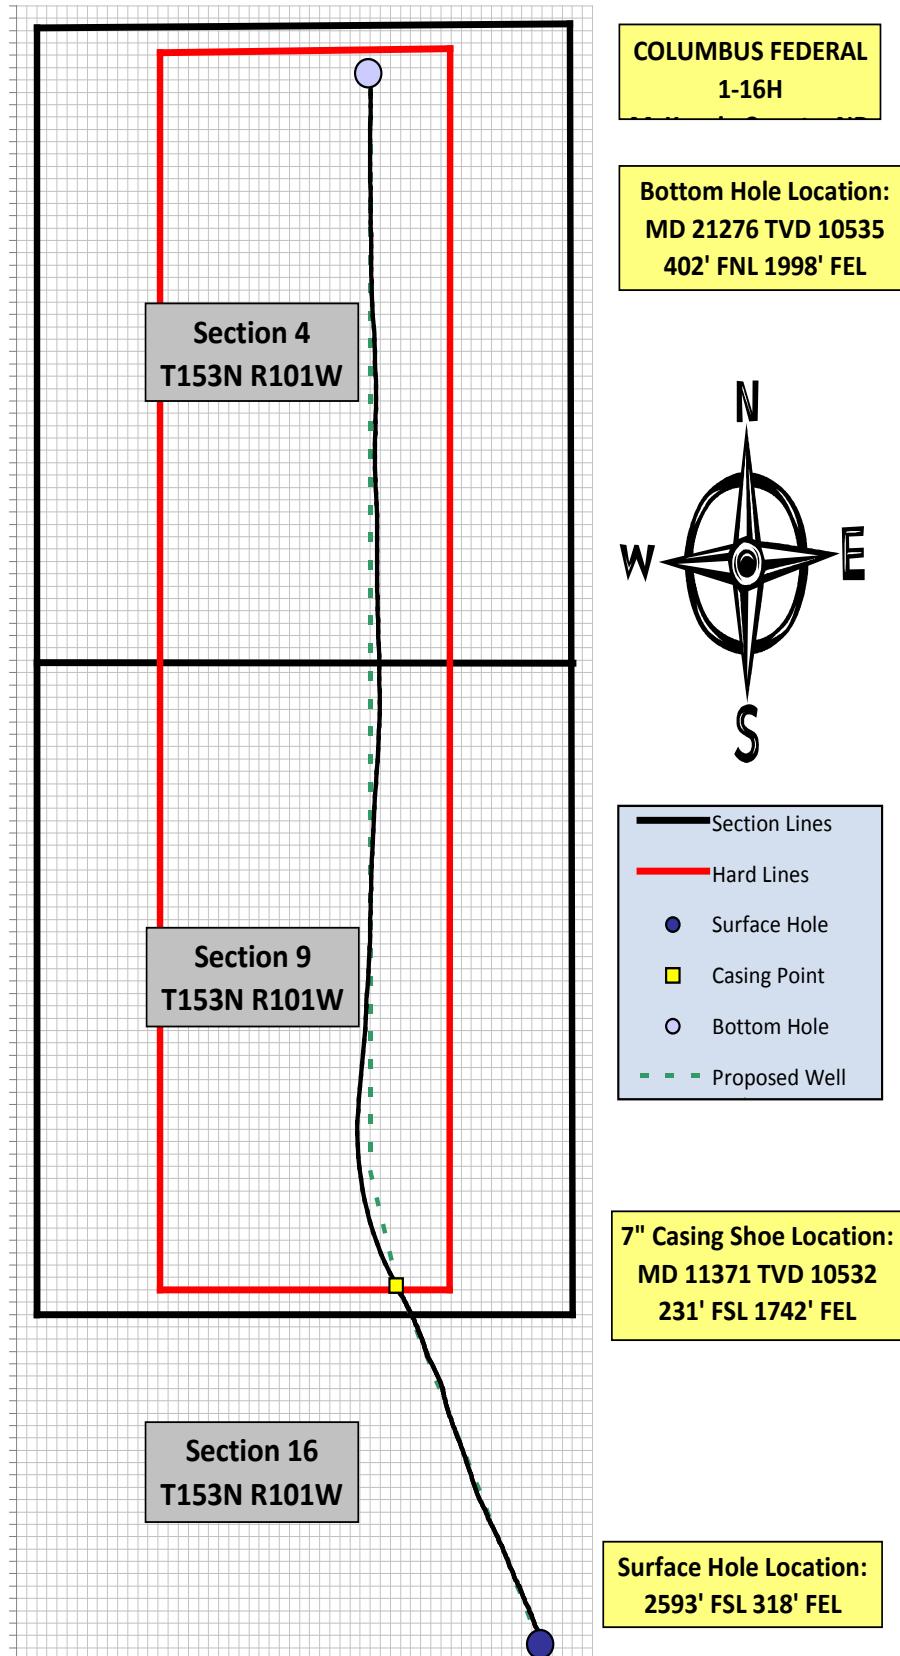

INTERPRETIVE CROSS SECTION

GEOLOGIST'S CONCLUSIONS

The oil and gas shows observed while drilling the Columbus Federal 1-16H were consistently good. A maximum of 8% oil was present in the mud at the shaker during the lateral. The gas shows did not increase until the last quarter of the hole's vertical section and were still unimpressive. Possible fractured intervals were encountered while drilling the curve, however not apparent in the lateral. The Scallion Interval appeared to be fractured with over 2550 units of gas encountered before entering the Upper Bakken Shale. If you consider that the Gas Buster was on for the entirety of the lateral, the gas shows were actually impressive averaging ~1500 units to 2200 units for the majority of the lateral and over 3400 units near the end of the lateral. Subsurface structural control utilizing cuttings evaluation and MWD gamma was sufficient to allow drilling the hole with low potential for stratigraphic positional misinterpretation. Unique sample and gamma signatures from the beds directly adjacent to the Target Zone aided geological interpretation; however, it was not always consistent throughout the lateral. Steering to correct for inclination or azimuth was possible for the entire length of the lateral, but became difficult near the end of the lateral. The well bore remained in the Middle Bakken Target Zone for 8051' (81%), above the Target Zone for 1079' (11%), and below the Target Zone for 775' (8%) of the lateral. Columbus Federal 1-16H will be completed with a multi-stage fracture stimulation after which its production potential will be revealed.

SUNDRY NOTICES AND REPORTS ON WELLS - FORM 43-02-03-21

INDUSTRIAL COMMISSION OF NORTH DAKOTA
OIL AND GAS DIVISION
600 EAST BOULEVARD DEPT 405
BISMARCK, ND 58505-0840
SFN 5749 (03-2004)

MAY 2013

RECEIVED
ND OIL & GAS
DIVISION

Well File No.
25156

PLEASE READ INSTRUCTIONS BEFORE FILLING OUT FORM.
PLEASE SUBMIT THE ORIGINAL AND ONE COPY.

DETAILS OF WORK

Continental Resources, Inc. requests a waiver from the tubing/pkr requirement included in NDIC 43-02-03-21: Casing, Tubing, and Cementing Requirements during the completion period immediately following the upcoming fracture stimulation. The following assurances apply:

- 1) The well is equipped with 26#/ft P-110 7" casing at surface with an API burst rating of 9960 psig for the 26 #/ft casing.
- 2) The frac design will use a safety factor of 0.85 * API burst rating to determine the max pressure.
- 3) Damage to the casing during the frac would be detected immediately by monitoring equipment.
- 4) The casing is exposed to significantly lower rates and pressures during flow back than during the frac job.
- 5) The frac fluid and formation fluids have very low corrosion and erosion rates
- 6) Production equipment will be installed as soon as possible after the well ceases flowing.
- 7) A 300# gauge will be installed on surface casing during flowback period.

RE: Continental Resources
Columbus Federal 1-16H
McKenzie County, ND
Rig: Patterson #490

Dear North Dakota Industrial Commission:

Please find enclosed the original certified Rate Gyro Surveys run from Surface to a depth of 1,902' M.D. on the above mentioned well.

If I can be of any further assistance, please do not hesitate to call me at 936-442-2566.

Sincerely,

Larae Townsend

DETAILS OF WORK

Requested variance to not run openhole logs. GR/CBL/CCL will be run from deepest point obtainable to base of surface casing.

Offset logs used will be the Nance Petroleum, Corp of Engr 31-10, Sec 10-153N-101W, Williams Co., ND.

The Gamma Ray Log will be run all the way to surface and all mud logs will be submitted as one paper copy and one digital tiff formatted file

* Approval Per Logs Run on # 10210 - Novmt 1-7-3A

DETAILS OF WORK

Continental Resources, Inc. plans to add a freshwater string to the already-approved casing string. The freshwater string will be 13-3/8" 48# H-40 set to a depth of 500' and cemented to surface. CRI also proposes the following changes to the directional plan. CRI plans to build at 3°/100 ft to 19° Inc starting at 2,040' MD and hold the 19° tangent at an azimuth of 334 to a depth of 10,595' KOP will be 10,595' MD 10,151' TVD building at 10°/100 ft and landing at the target formation at 11,305' MD 10,537' TVD. Intermediate casing pt will be located at 2,898' N and 1,423' W of SHL. Modified directional plan and casing program are attached.

RE: CORES AND SAMPLES

Well Name: **COLUMBUS FEDERAL 1-16H** Well File No.: **25156**
Location: **NESE 16-153-101** County: **MCKENZIE**
Permit Type: **Development - HORIZONTAL**
Field: **BAKER** Target Horizon: **MIDDLE BAKKEN**

Dear BECKY BARNES:

North Dakota Century Code (NDCC) Section 38-08-04 provides for the preservation of cores and samples and their shipment to the State Geologist when requested. The following is required on the above referenced well:

- 1) All cores, core chips and samples must be submitted to the State Geologist as provided for the NDCC Section 38-08-04 and North Dakota Administrative Code 43-02-03-38.1.
- 2) Samples shall include all cuttings from:

Base of the Last Charles Salt

Samples of cuttings shall be taken at 30' maximum intervals through all vertical, build and horizontal sections. Samples must be washed, dried, packed in sample envelopes in correct order with labels showing operator, well name, location and depth, and forwarded in standard boxes to the State Geologist within 30 days of the completion of drilling operations.

- 3) Cores: ALL CORES cut shall be preserved in correct order, properly boxed, and forwarded to the State Geologist within 90 days of completion of drilling operations. Any extension of time must have written approval from the State Geologist.
- 4) All cores, core chips, and samples must be shipped, prepaid, to the State Geologist at the following address:

**ND Geological Survey Core Library
Campus Road and Cornell
Grand Forks, ND 58202**

- 5) NDCC Section 38-08-16 allows for a civil penalty for any violation of Chapter 38 08 not to exceed \$12,500 for each offense, and each day's violation is a separate offense.

Sincerely

Richard A. Suggs
Geologist

Oil and Gas Division

**RE: HORIZONTAL WELL
COLUMBUS FEDERAL 1-16H
NESE Section 16-153N-101W
McKenzie County
Well File # 25156**

Dear Terry:

Pursuant to Commission Order No. 21551, approval to drill the above captioned well is hereby given. The approval is granted on the condition that all portions of the well bore not isolated by cement, be no closer than the **200' setback** from the north & south boundaries and **1220' setback** (per Commission policy) from the east & west boundaries within the 1280 acre spacing unit consisting of Sections 4 & 9-T153N-R101W.

PERMIT STIPULATIONS: No Drilling Pit will be allowed. The Rat and Mouse hole must be cemented. In cases where a spacing unit is accessed from an off-site drill pad, an affidavit must be provided affirming that the surface owner of the multi-well pad agrees to accept burial on their property of the cuttings generated from drilling the well(s) into an offsite spacing/drilling unit. Due to surficial water adjacent to the well site, a dike is required surrounding the entire location. CONTINENTAL RESOURCES, INC. must run open hole logs to include a porosity and resistivity log from KOP to the base of the surface casing. Liner required under the location. Spill contingency plan must be in place prior to spud. CONTINENTAL RESOURCES must contact NDIC Field Inspector Richard Dunn at 701-770-3554 prior to location construction.

Drilling pit

NDAC 43-02-03-19.4 states that "a pit may be utilized to bury drill cuttings and solids generated during well drilling and completion operations, providing the pit can be constructed, used and reclaimed in a manner that will prevent pollution of the land surface and freshwaters. Reserve and circulation of mud system through earthen pits are prohibited. All pits shall be inspected by an authorized representative of the director prior to lining and use. Drill cuttings and solids must be stabilized in a manner approved by the director prior to placement in a cuttings pit."

Form 1 Changes & Hard Lines

Any changes, shortening of casing point or lengthening at Total Depth must have prior approval by the NDIC. The proposed directional plan is at a legal location. The minimum legal coordinates from the well head at casing point are: 2869' N & 902' W. Also, based on the azimuth of the proposed lateral the maximum legal coordinate from the well head is: 12908' N and a minimum legal coordinate from the well head of 902' W.

Location Construction Commencement (Three Day Waiting Period)

Operators shall not commence operations on a drill site until the 3rd business day following publication of the approved drilling permit on the NDIC - OGD Daily Activity Report. If circumstances require operations to commence before the 3rd business day following publication on the Daily Activity Report, the waiting period may be waived by the Director. Application for a waiver must be by sworn affidavit providing the information necessary to evaluate the extenuating circumstances, the factors of NDAC 43-02-03-16.2 (1), (a)-(f), and any other information that would allow the Director to conclude that in the event another owner seeks revocation of the drilling permit, the applicant should retain the permit.

Permit Fee & Notification

Payment was received in the amount of \$100 via credit card. It is requested that notification be given immediately upon the spudding of the well. This information should be relayed to the Oil & Gas Division, Bismarck, via telephone. The following information must be included: Well name, legal location, permit number, drilling contractor, company representative, date and time of spudding. Office hours are 8:00 a.m. to 12:00 p.m. and 1:00 p.m. to 5:00 p.m. Central Time. Our telephone number is (701) 328-8020, leave a message if after hours or on the weekend.

Survey Requirements for Horizontal, Horizontal Re-entry, and Directional Wells

NDAC Section 43-02-03-25 (Deviation Tests and Directional Surveys) states in part (that) the survey contractor shall file a certified copy of all surveys with the director free of charge within thirty days of completion. Surveys must be submitted as one electronic copy, or in a form approved by the director. However, the director may require the directional survey to be filed immediately after completion if the survey is needed to conduct the operation of the director's office in a timely manner. Certified surveys must be submitted via email in one adobe document, with a certification cover page to certsurvey@nd.gov.

Survey points shall be of such frequency to accurately determine the entire location of the well bore.

Specifically, the Horizontal and Directional well survey frequency is 100 feet in the vertical, 30 feet in the curve (or when sliding) and 90 feet in the lateral.

Confidential status

Your request for confidential status of all information furnished to the Director, or his representatives, is hereby granted. Such information, except production runs, shall remain confidential for six months commencing on the date the well is spud.

Confidential status notwithstanding, the Director and his representatives shall have access to all well records wherever located. Your company personnel, or any person performing work for your company shall permit the Director and his representatives to come upon any lease, property, well, or drilling rig operated or controlled by them, complying with all safety rules, and to inspect the records and operation of such wells and to have access at all times to any and all records of wells. The Commission's field personnel periodically inspect producing and drilling wells. Any information regarding such wells shall be made available to them at any time upon request. The information so obtained by the field personnel shall be maintained in strict confidence and shall be available only to the Commission and its staff.

Surface casing cement

Tail cement utilized on surface casing must have a minimum compressive strength of 500 psi within 12 hours, and tail cement utilized on production casing must have a minimum compressive strength of 500 psi before drilling the plug or initiating tests.

Logs

NDAC Section 43-02-03-31 requires the running of (1) a suite of open hole logs from which formation tops and porosity zones can be determined, (2) a Gamma Ray Log run from total depth to ground level elevation of the well bore, and (3) a log from which the presence and quality of cement can be determined (Standard CBL or Ultrasonic cement evaluation log) in every well in which production or intermediate casing has been set, this log must be run prior to completing the well. All logs run must be submitted free of charge, as one digital TIFF (tagged image file format) copy and one digital LAS (log ASCII) formatted copy. Digital logs may be submitted on a standard CD, DVD, or attached to an email sent to digitallogs@nd.gov. Thank you for your cooperation.

Sincerely,

David Tabor
Engineering Technician IV

NOTE: A Gamma Ray log must be run to ground surface and a CBL must be run on intermediate or longstring casing string if set.

Surveys are required at least every 30 feet in the build section and every 90 feet in the lateral section of a horizontal well. Measurement inaccuracies are not considered when determining compliance with the spacing/drilling unit boundary setback requirement except in the following scenarios: 1) When the angle between the well bore and the respective boundary is 10 degrees or less; or 2) If Industry standard methods and equipment are not utilized. Consult the applicable field order for exceptions.

If measurement inaccuracies are required to be considered, a 2° MWD measurement inaccuracy will be applied to the horizontal portion of the well bore. This measurement inaccuracy is applied to the well bore from KOP to TD.

REQUIRED ATTACHMENTS: Certified surveyor's plat, horizontal section plat, estimated geological tops, proposed mud/cementing plan, directional plot/plan, \$100 fee.

See Page 2 for Comments section and signature block.

To: Tabor, David
Subject: FW: Columbus Federal 3-16H and pad.

From: Robert Sandbo [<mailto:Robert.Sandbo@clr.com>]

Sent: Friday, March 01, 2013 4:48 PM

To: Tabor, David

Subject: RE: Columbus Federal 3-16H and pad.

Thanks David. I got the email. Here is our schedule for the pad as of right now:

Columbus Federal 1-16H to spud on 3/24/2013 (may spud with the small rig around one week earlier if possible). We had planned on drilling the Columbus 1-16H first and then come back in a year or so and drill the other 4 but if we get the permits for all and the order on the 1280 allows us to drill them all back to back, we will most likely go ahead and drill them all at once. We will take a look at the 1280 order that covers the Columbus 1-16H and see if we can batch drill them.

You should have everything on the 3-16H and the affidavit sometime Monday.

Thanks for the help,

Bob Sandbo
Regulatory Compliance Supervisor

March 7, 2013

Industrial Commission of North Dakota
Oil & Gas Division
600 East Boulevard, Dept 405
Bismarck, North Dakota 58505

Continental Resources, Inc. (CRI) respectfully submits the following information concerning the drilling of the Columbus Federal 1-16H, 2-16H & 3-16H1, and the Tallahassee 2-21H & 3-21H1

Township 153N, Range 101W
Section 16, NE/4 SE/4 & SE/4 NE/4 McKenzie County, North Dakota.

The Columbus Federal and Tallahassee well(s) are located in an environmentally sensitive area in close proximity to the Missouri River. Therefore, Continental Resources Inc. would like to propose the following automatic shut down equipment and level sensing monitoring equipment be deployed on the site to aid in the prevention of any accidental release or safety issue. A schematic diagram and pictures of an existing tank battery with emergency shutdown equipment has been included with this affidavit.

- 1) Tank Side (oil & water tanks)
 - a. ABB Levelmaster dual float
 - b. High level switch as backup
 - c. Battery box with solar backup
- 2) Treater & Separator
 - a. Temperature device in each vessel
 - b. Pressure transducer in each vessel
 - c. Level switch in each vessel
 - d. Battery box with solar backup
- 3) Wellhead
 - a. TotalFlow Controller
 - b. Emergency Shutdown Valve Package
 - c. Battery box with solar backup
 - d. Pressure transducer on casing & tubing
- 4) Flare
 - a. Scrubber pot high level switch
 - b. Monitoring flare for low temp output – alarm if flare goes out

- 5) System Automation through the proposed equipment will provide an independent control system on all equipment on site which will be able to shut the well(s) in should any of the other equipment be incapacitated or functioning improperly.

Don Kennedy

Don Kennedy, Sr. Production Engineer
Continental Resources, Inc.

STATE OF OKLAHOMA)
)ss:
COUNTY OF OKLAHOMA)

On the 7th day of March, 2013, before me, a Notary Public in and for said County and State, personally appeared Don Kennedy, known to me to be the Sr. Production Engineer of Continental Resources, Inc., the Corporation that executed the within instrument, and acknowledged to me that such Corporation executed the same.

Continental Resources, Inc. (CRI) respectfully submits the following information concerning the prevention of a wellbore collision while drilling the Columbus Federal 3-16H, SENE of Sec. 16, T153N, R101W, Dunn County, North Dakota.

The Mildred 1, NDIC File No. 12306, is a plugged and abandoned, Red River formation, directional well with a SHL of 1325' FSL, 660' FEL of Sec. 4, T153N, R101W. The directional wellbore lies approximately 660' FEL of Sec. 4, T153N, R101W, terminating at a BHL 769' N. of SHL, 2094' FSL of Sec. 4, T153N, R101W. Bottom hole TVD of the existing directional well is 13451'. The deepest casing string is 8-5/8" set at a depth of 3035' TVD.

The proposed Columbus Federal 3-16H is a horizontal well targeting the Middle Bakken formation. Surface hole location for the Columbus Federal 3-16H is 2469' FSL and 199' FEL of Sec. 16, T153N, R101W. The majority of the Columbus Federal 3-16H lateral will lie 760' FEL in order to avoid the existing Mildred 1 wellbore by approximately 100'. The lateral will taper back to 660' FEL, at 10155' N. of SHL, after adequately clearing the segment of the Mildred 1 wellbore within this Baker-Bakken pool.

The Baker-Bakken pool, as defined by NDIC Order No. 21551, is the interval from 50 feet above the top of the Bakken Formation to above the top of the Birdbear Formation. CRI has assessed the geology of the area and has determined this Bakken interval to be approximately 10461' TVD to 10,771' TVD. On the surface planar, the Mildred 1 wellbore exist in this interval for approximately 38', from 1874' FSL to 1912' FSL of Sec. 4, T153N, R94W.

The completion of the Columbus Federal 3-16H will protect the integrity of the Mildred 1 wellbore. Stimulation plans will be made to include a buffer zone with swell packers of a minimum 500' from either side of the Mildred 1 wellbore existing within the Baker-Bakken pool. This zone will not be perforated or completed.

CRI believes adequate precautions have been taken to prevent the possibility of a wellbore collision and accepts all responsibility should such a collision occur.

Sarah Madden, PD Engineer
Continental Resources, Inc.

STATE OF OKLAHOMA)
)ss:
COUNTY OF OKLAHOMA)

On the 6th day of March 2013, before me, a Notary Public in and for said County and State, personally appeared Sarah Madden, known to me to be a PD Engineer of Continental Resources, Inc., the Corporation that executed the within instrument, and acknowledged to me that such Corporation executed the same.

Continental Resources, Inc. (CRI) respectfully submits the following information concerning the drilling of the Columbus Federal 1-16H, 2-16H and 3-16H and the Tallahassee 2-16H and 3-16H, Sec. 16, T153N, R101W, Williams County, North Dakota.

CRI would like to propose the following safeguards and precautions to be taken while drilling the Columbus Federal-Tallahassee wells to prevent any contamination to freshwater sources during the drilling and completion of the wells:

- 1) During construction of the location, the entire location will be constructed per NDIC permit stipulations, ensuring any spills or runoff which occur on location do not penetrate the fresh ground water and are contained on the surface of the location. These modifications include, but are not limited to, the inclusion of a liner being placed under the location, and cementing of the rathole and mousehole.
- 2) Drainage will be re-routed to avoid the location, and erosion controls will be employed, as appropriate, around the site to reduce erosion and the resulting sediment contamination to freshwater runoff due to weather events.
- 3) The earthen berm, constructed to keep any freshwater runoff off the location, will also eliminate any spills from leaving the location
- 4) No reserve pit or dry cuttings pit will be utilized on location.
- 5) The conductor will be drilled to a depth of 80', and 20" pipe will be run to depth and cemented to surface.
- 6) During drilling operations, a freshwater protection string of 13-3/8" 48# H40 casing will be set to a depth of 500' and cemented to surface to protect the shallow freshwater zones. Standard 9-5/8" 36# J-55 surface casing will be set 100' into the Pierre Shale, to a depth of 1940', and cemented to surface.
- 7) A frac string will be used to protect the intermediate casing during hydraulic fracturing of the well.
- 8) CRI is submitting a comprehensive rig specific Spill Prevention Containment and Countermeasure Plan to prepare for any event which may occur during drilling and completion operations. A spill trailer will be located on location for spill response, if necessary.

CRI believes adequate planning and precautions are being taken to prevent any contamination to ground water and surface waters.

APPENDIX

TYPICAL DRILL RIG LOCATION PLAN

DISCHARGE REPORTING FORM

DISCHARGE SOURCE INSPECTION RECORD

**SPILL PREVENTION CONTAINMENT
AND COUNTERMEASURE PLAN (SPCC)**

PER 40 CFR 112.7 DATED: SEPTEMBER 14, 2012

This plan will follow the guidelines and format of 40 CFR part 112.7 and will replace the self-certified plan currently in affect.

112.7(a)(1) Discussion of facilities' conformance with the requirements listed in this part. The storage tanks on site store petroleum based drilling mud, diesel fuel, the invert tanks being the base for the drilling mud, salt water tanks, fresh water tanks, crude oil storage tanks and empty tanks for emergency storage. In addition to the storage tanks, other operations that can produce contaminants are the drilling operation itself and the cuttings drying operation. It is the purpose of this plan to define the prevention containment and countermeasure plan for discharges from any of these sources on the site. All the actions taken in this regard are per approved policies of this part of 40 CFR 112. Universally and in setting up the drilling operation on the site prevention measures are taken by grading the site to contain discharges, building in effective valves and other related operational and control mechanisms to prevent discharges. This equipment is installed and tested prior to beginning drilling operations. The tanks and equipment are installed within secondary containment berms and containment trenches and sumps are installed around the facilities prior to beginning drilling operations with capacity to contain with freeboard a rupture of the largest vessel associated with the containment. In the event of a discharge the sites are equipped with vacuums that are capable of picking up the spilled material and loading it into containers where it can be transferred to an approved disposal location. In the event of a discharge larger than can be handled by Cyclone and other manpower on location or that leaks offsite and potentially into navigable waters of the US, the operator, under his directions will arrange for trained contract personnel to immediately contain and clean-up the discharge.

112.7(a)(2) This plan will comply with all applicable items of this part. With no deviations anticipated.

112.7(a)(3) The attached sketch shows a typical layout of the drill rig sites depicting the location, size and contents of the tanks. There are no underground tanks nor are there any mobile or portable containers associated with these drilling locations. The site is prepared in advance of the drill rig coming onto the site. The sites are designed and constructed to contain spills and tank ruptures on the site. The drill rig and associated tanks and equipment are laid out in an efficient and effective manner to streamline the drilling operation. Frack tanks are located in such a manner that they have easy access to the mud tanks with valves located on both ends of transfer lines. The drilling mud tanks are plumbed to the drill rig with valves appropriately located to

stop flow from the tanks to the rig or from the rig to the tanks. The cuttings from the drilling operation are screened from the recycled drilling mud and directed to a container where they are dried using fly ash or some other equally effective absorbent material and are then transferred to the lined cuttings disposal pit onsite. The fuel tank is tied into the fuel lines providing fuel flow to the generators. Blowout preventers are placed over the drill hole casing and tested prior to beginning the drilling.

112.7(a)(3)(i) The type of oil in each fixed container and its storage capacity. No mobile or portable containers anticipated.

SOURCE	MAJOR TYPE OF FAILURE	TOTAL CAP. (BBLS.) (Type Fluid)	RATE (BBLS/MIN)	DIRECTION OF FLOW	SECONDARY CONTAINMENT
Diesel Fuel Tank	Leak or rupture	14,000 Maximum (Diesel)	Depends on size	Dams and/or Trenches	Site Perimeter Containment
Pumps & Engines	Leakage	½ - gal/hr. (lube oil)	½ - 1 gal/hr.	Drip Pans or Trenches	Site Perimeter Containment
Crude Oil Tanks	Rupture or Leak	400 BBLS	Depends on Type of Failure	Contained within Berm	Tank Battery Berm
Mud Tanks, Vibrator Rotary Hoses	Leak or rupture	450 BBLS Maximum per tank (Petroleum based drilling fluid)	Varies	Drip Pans for Hoses, Trench & Sump or Berms for Tanks	Site Perimeter Containment
Wellhead Blowout Preventer	Blowout or kicking well	Depends on severity (Well bore fluids)	Will vary	Away from well head to Trench and Sump	Site Perimeter Containment

112.7(a)(3)(ii) Discharge Prevention Measures including procedures for routine handling of products (loading, unloading and facility transfers, etc.); Before the drill rig moves on, the site is prepared for discharges associated with tank ruptures, as the site is graded to contain all discharges and storm runoff. When the rig is moved onto the site and set up additional discharge prevention and containment measures are taken. Equipment inspection records

are reviewed and the equipment is inspected following written procedures, the written procedures are attached in the appendix of the plan. A dated record of the inspection, signed by the appropriate supervisor or inspector is recorded and filed with time sheets or safety meeting minutes, when the drill rig changes locations and notes of deficiencies or acceptance are included. Operation and maintenance of equipment is designed to prevent discharges. Personnel are trained and made aware of the discharge prevention procedures and applicable pollution control laws, rules and regulations. The tool pusher in charge of the drill rig will have in his possession a copy of the Cyclone Drilling SPCC Plan and it is his responsibility to instruct the employees and make them aware of the discharge prevention measures contained in the plan. Scheduled briefings and refreshers are to be conducted with all the employees prior to and during rig up operations, such briefings are to be held during regularly scheduled safety meetings.

Employees are assigned to make routine inspections of valves, hose connections and other fluid connections for leaks. These inspections are made and documented on a monthly basis at a minimum. These leaks are provided drip pans and reported to the appropriate personnel for repair. If repairs cannot be readily made then regular emptying of the drip pans is required until the repairs can be made. Inspections of trenches and sumps are made on a regular basis to insure that they are free flowing and functional. The containment berms are also inspected periodically to insure their stability and function.

112.7(a)(3)(iii) Discharge or drainage controls such as secondary containment around containers and other structures, equipment, and procedures for the control of the discharge; Containment berms are placed around the tanks containing crude oil, the invert drilling fluid, salt water tanks and the empty tanks to be used for emergency storage, as secondary containment. The containment berms are of adequate height to contain a rupture and total failure of the largest tank contained within it amounting to 400 BBLS requiring a containment capacity of 3,000 cu. ft. Similarly, berms are built around the crude oil storage tanks on the site and requiring the same containment volume. Berms or trenches and sumps are constructed around the drill rig itself, the drilling mud tanks and diesel fuel tank, the sumps and trenches are sized to contain the volume of the largest tank in the case of a rupture and complete failure. Additionally, drip pans are placed under leaking valves, hose joints and other sources of small leaks until the item can be replaced or repaired to not leak. Regular inspections of these facilities are made to insure that they will function per plan.

112.7(a)(3)(iv) Countermeasures for discharge discovery, response, and cleanup (both the facility's capability and those that might be required of a contractor); Regular inspections may reveal a discharge such as a leaking valve or hose joint. These instances can readily be cleaned up by employees of Cyclone Drilling using on site vacuums and containers. Larger spills up to and

beyond the reporting limits can also be handled by Cyclone Drilling employees. Spills that exceed the limitations of the onsite cleanup equipment or in the event of a spill migrating offsite, will require the tool pushers' notification of the operator/owner of the site and they will contact the clean-up contractor they have contracted with to contain and clean-up such events.

112.7(a)(3)(v) Methods of disposal of recovered materials in accordance with applicable legal requirements: When spills occur the fluids will be either soaked up with absorptive material and placed in a container for transporting to an approved disposal site or vacuumed up and placed in a storage container for transportation to an approved disposal site. It is understood by all Cyclone Drilling employees that there is not an approved disposal site on or around the drilling rig to dispose of these recovered materials or fluids, other than drying drilling cuttings and disposing of them in the cuttings pit.

112.7(a)(3)(vi) Contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with whom operator has an agreement for response, and all appropriate Federal, State, and local agencies who must be contacted in the event of a discharge as described in § 112.1(b). Facility Response Coordinator for Cyclone Drilling HSE Dept. (Ph. 307-682-4161) is responsible for contacting the operators environmental group so they can contact the appropriate Federal, State and Local personnel in the event of a discharge as described in § 112.1(b).

112.7(a)(4) Information and procedures to enable a person reporting a discharge as described in § 112.1(b) to relate information on the exact address or location and phone number of the facility; the date and time of the discharge, the type of material discharged; estimates of the total quantity discharged; estimates of the quantity discharged as described in § 112.1(b); the source of the discharge; a description of all affected media; the cause of the discharge; any damages or injuries caused by the discharge; actions being used to stop, remove, and mitigate the effects of the discharge; whether an evacuation may be needed; and, the names of individuals and/or organizations who have also been contacted. In the event of a discharge as described in §112.1(b) it is the responsibility of the tool pusher to relate the above information to the operators environmental group so they can contact, any emergency organizations and provide the reporting necessary to the Federal, State and Local agencies that require reporting of such a discharge. The tool pusher on the rig is the person in charge and either he or the drilling superintendent have the responsibility of reporting the answers to the above questions. These questions are spelled out on a "Discharge Reporting Form" that each has at his disposal in the appendix of "Cyclone Drilling Oil Spill Contingency Plan". In reporting a discharge a list of all individuals and or organizations that received the report will be listed.

112.7(a)(5) Plan procedures to be used when a discharge occurs:

- 1) Immediately extinguish any heater or fire that may ignite the spill.
- 2) No smoking during spill control operations.
- 3) Close all associated valves.
- 4) Direct discharge to ditches or drains that will carry the discharge to a safe holding sump or reserve pit.
- 5) Distribute hill, fibertex, gel, barite, or any other absorptive material available as required to contain the discharge not entering the ditch, sump or reserve pit.
- 6) Inspect area to ensure that all of the discharge is contained in ditches, sums or reserve pits. Add ditches or diversion structures as required to contain the discharge onsite.
- 7) Start jet or sump pumps and transfer discharged material from sums to reserve pit or holding tanks.
- 8) After discharge is stopped, collect all used hulls, fibertex and similar absorptive material for disposal per instruction from the drilling superintendent or the tool pusher. No oil is to remain in the ditches or sums that may create a fire hazard.
- 9) Hold collected discharged material for hauling and disposal in an approved location.
- 10) If discharge migrates from the drill rig location Cyclone Drilling personnel will use these same procedures stop and recover the discharge. Additionally the tool pusher will notify the owners representative to notify the contract clean-up company for clean-up and mitigation of the offsite discharge migration.
- 11) Fill out Site Discharge Reporting Form and distribute to appropriate agencies and personnel. (Form included in Appendix of Plan)

112.7(a)(5)(b) Flow diagram of potential discharges from significant sources as a result of facilities failure: Flow diagrams and quantities included in appendix of the plan.

112.7(a)(5)(c) Site discharge containment system: The site discharge containment system for the Cyclone Drilling Rigs is a combination of containment berms, confinement trenches, sums and reserve pits. Drip pans will be used for small discharges until repairs are made or equipment replaced. (See typical site plan included in appendix.)

112.7(a)(5)(d) Not applicable as all measures spelled out in this part are practical as describe in each section.

112.7(a)(5)(e) Inspections, tests and records: Written procedures are provided on the "Discharge Source Inspection Record", these inspections are recorded at least on a monthly basis or whenever a leak or discharge is detected and reported, using the "Discharge Source Inspection Record" in the appendix. These records are signed by the tool pusher onsite and maintained by Cyclone Drilling for a period of 3 years.

112.7(a)(5)(f) Personnel Training and Discharge Prevention Procedures:

The personnel working on the drilling crews are trained in the maintenance and operation of all the equipment to prevent discharges, the discharge procedures and general facility operations. They are also made aware of the contents of the SPCC Plan. The tool pusher on each crew is the person on the location who is accountable for discharge prevention and who reports to the Cyclone Drilling Management. The tool pusher is responsible for conducting discharge prevention briefings and assuring an adequate understanding of the Cyclone Drilling SPCC Plan for the facility and any recent developments of new precautionary measures due to failures or malfunctions are implemented.

112.7(a)(5)(g) Site Security: All persons entering the site are required to check in with the tool pusher of the on duty crew. Unauthorized persons are not allowed on the site. Unauthorized visitors are easily detected, questioned regarding there presents and appropriately escorted to take care of their business.

112.7(a)(5)(h) Facility Tank Truck Loading/Unloading: The tank truck loading and unloading areas on the Cyclone Drilling Sites are located adjacent to the frack tank or crude oil tank batteries the area adjacent to the tank battery, where tank trucks are loaded and unloaded will be graded to drain into the containment trenches and associated sump, surrounding the drill rig, mud tanks, fuel tank, etc. Wheel chocks are used to prevent the truck from moving while connected to the tanks during loading/unloading operations. Before departure the vehicle is inspected for leaks in the lowermost drains and outlets and if they are any detected the associated valves are tightened or adjusted to prevent discharge while in transit. All above ground containers are checked and evaluated for risk of discharge or failure and as necessary appropriate action shall be taken.

Re: Columbus Federal 1-16H

Continental Resources, Inc., would like to request all filings and information regarding the above captioned well be considered "Tight Hole".

Please charge the Continental Resources, Inc., credit card that is on file with your agency for the application fee of this well.

Thank you for your prompt attention to this matter. If you have any questions, you may contact me at 405-234-9139 or email the following Terry.Olson@clr.com.

Sincerely,

CONTINENTAL RESOURCES, INC.

Existing Wells Within Spacing Unit

Continental Resources, Inc. has identified the following wells which currently exist in the spacing unit consisting of:

Sect 4 & 9 - T153N - 101W

McKenzie County, ND

File Number	API Number	Location	Well Name	Footages		Wellbore
10710	3305301814	NWSE 9-153N-101W	Novak 1-9-3A	1980 FSL	1980 FEL	Vertical
12306	3305302220	NESE 4-153N-101W	Mildred 1	1325 FSL	660 FEL	Directional
15358	3305302556	SENE 4-153N-101W	Lewis and Clark 2-4H	3028 FSL	332 FEL	Horizontal

CRI has determined that the identified existing wells in the spacing unit specified above are not within 500' of the proposed Columbus Federal 1-16H wellbore and do not pose any collision threats during drilling or completion operations.

**DAMAGE SETTLEMENT AND
ROAD USE AGREEMENT**
Columbus 1-16H, et al.

KNOW ALL MEN BY THESE PRESENT:

WHEREAS, Continental Resources, Inc., whose address is P.O. Box 1032, Enid, OK 73702-1032, hereinafter referred to as OPERATOR, desires to use the following described lands located in McKenzie County, State of North Dakota, in order to access and develop an oil and gas well drillsite for the drilling of multiple wells:

Township 153 North, Range 101 West of the 5th P.M.

Section 15: SW^{1/4}NW^{1/4}, NW^{1/4}SW^{1/4}

Section 16: SE^{1/4}NE^{1/4}, NE^{1/4}SE^{1/4}, and EXCEPTING THEREFROM that portion owned by the United States of America or any governmental subdivision thereof.

SEE ATTACHED SURVEYORS PLATS

WHEREAS, Robert P. Hayden and Josephine A. Hayden, husband and wife, of 4512 Highway 85 N, Williston, ND 58801 is the OWNER(s) of the surface of said land, and

WHEREAS, said OWNER and the above said OPERATOR, after diligent inquiry into the matter, have agreed upon a reasonable and proper single lump sum amount as compensation for surface damages, disruption, annual loss of production, lost land value, lost use of and access to a portion of said land, and lost value of any improvements as a result of the drilling of the Columbus 1-16H and other wells and the construction, building, maintenance or utilization of roads and multiple well location site thereon in connection therewith, or any other drilling or operational activities conducted by said OPERATOR upon said lands in connection with the drilling, completing, and/or plugging and abandonment of the Columbus 1-16H and other wells.

NOW, THEREFORE, in consideration of Ten and 00/100----- Dollars (\$ 10.00) and other good and valuable consideration paid to OWNER by OPERATOR, the receipt and sufficiency of which is hereby acknowledged, OWNER does hereby accept as compensation for NORMAL damages, disruption, lost land value, lost use of and access to a portion of said land, lost value of any improvements, and loss of production and income sustained by OWNER and/or OWNER'S tenant caused by drilling and production operations for the Columbus 1-16H well and up to four additional wells.

OWNER, in exchange for the compensation set forth above and other valuable consideration, does hereby grant an easement for the use of the land as identified on the attached surveyor's plat to access and develop an oil and gas wellsite (pad) for the captioned well and up to four additional wells, to build a road (as indicated on the attached plat) and allow improvements to be made to construct a usable access road and wellsite as listed above and does hereby, further, release OPERATOR, its agents, contractors, employees, successors and assigns, from any and all claims, demands and causes of action arising under the law or growing out of what may be considered any NORMAL damages of any kind, character or description that are sustained to the land, whether now apparent or known to them or which may hereafter develop, as a result of the operations conducted with the intent of building a pad and access road for the drilling and completing an oil and/or gas well on the above described lands which shall consist of, but not be limited to, the construction of roads accessing the drilling site, and the moving of earth to provide the placement of the drilling rig, storage batteries or facilities, ponds, reserve pit, or equipment necessary for and related to said drilling operations. The production facility may include, but will not necessarily be limited to a tank battery, treater, pumping unit, reserve pit, pipelines, electric lines, and other production facilities and/or plugging and abandonment of the aforementioned wells.

This agreement specifically prohibits the conversion of the captioned well or any other located on this site to a saltwater disposal well or injection well without the further agreement and written consent of the OWNER, their successors or assigns.

For the same consideration recited above, this agreement shall and does include and grant, from the OWNER to OPERATOR, an easement for the laying of electric transmission lines and pipelines from the drillsite in the proximity of the ditch along the entire length of the access road to tie in to other collection pipelines, which pipelines are utilized solely, specifically and only for the wells drilled on the drillsite as outlined on the attached plat while they are being operated as oil or gas wells. Owner shall be supplied with thirty day prior written notice of any pipelines to be installed and shall be supplied with a copy of the final plat for the same and said plat shall be recorded with the recorders' office for said county and state as notice that said pipeline has been installed subject to the provisions of this agreement.

OPERATOR agrees that upon proven production, if adequate electrical power is available within a distance of two mile or less, that within a reasonable period of time, an Electric Pumping Unit will be utilized and installed on the said well to help maintain noise to a minimum.

OWNER shall allow for storage on site, of cuttings within the reclaimed reserve pit, from drilling the wells permitted on this drillsite, only if permitted and authorized by the NDIC.

OWNER shall waive any and all yearly site rentals for the captioned well and up to four additional wells while they are being operated as oil or gas wells.

OPERATOR agrees to assign to Owners, their successors and assigns, a perpetual shared use agreement, at no cost to OWNERS, for that certain Road Easement recorded as Document No. 425514 and OPERATOR shall prepare and record such assignment as approved by the OWNERS. AND further, the Owners, their successors and assigns, reserve cost free, the shared use of the road constructed pursuant ~~to the~~ easement contained herein for the access road granted, by OWNERS to OPERATOR, for access to and through the above described lands as identified on the attached plat. OPERATOR agrees to maintain the roads above mentioned in a good and usable condition at all times at their sole expense. *PBZP*

OPERATOR shall indemnify and agrees to fully defend, protect and hold harmless OWNERS their successors and assigns, employees and agents, from and against each and every claim, demand, action, cause of action or lawsuit, and any liability, cost, expense, damage, action, cause of action or lawsuit, and any liability, cost, expense, damage or loss (including environmental), including attorneys' fees and court costs, that may be asserted against OWNER and/or OPERATOR by any third party, including OPERATOR's employees and agents, arising from or on account of any operations conducted by OPERATOR or for the benefit of the OPERATOR on the captioned premises

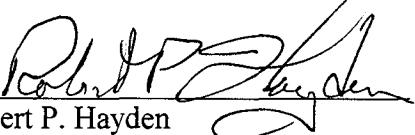

OPERATOR agrees to maintain the site, access roads and ditches, and to keep the same free from refuse and weeds. OPERATOR further agrees to utilize colors for the tanks, pumping unit and other equipment that will tend to blend with surrounding terrain (similar or like the colors used for equipment on federal or BLM leases), to fence the well site and to maintain said fence if requested by OWNER; and to install cattle guards where necessary if needed or requested by the OWNER.

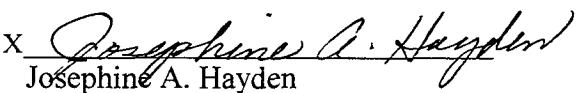

OWNERS acknowledge receipt of written notice in conformity with any and all applicable statutes and regulations of the captioned well location, proposed spud date, nature and extent of drilling, activities, access route and their right to compensation for damage to the surface. Notice shall be provided as recited above for pipelines and utility lines for the captioned well, however, Owner waives any right to receive written notice of any other future operation conducted within the access road and well site, installation, both above ground and underground for the captioned well. Owner further acknowledges that the specific location of the well site and access road as finally constructed may vary slightly from that indicated prior to the execution of this agreement and expressly waives any additional notice of such variance prior to commencement of construction, and agrees that the consideration recited herein covers all damages regardless of the variance in location.

IN WITNESS WHEREOF:

This Damage Settlement and Road Use Agreement is executed this 16 day of January, 2012.
